

Week 2 Roadmap – Web Exploitation & Reconnaissance

Day 1–2: Inspection & Client-Side Basics

- **Challenges:**
 - Insp3ct0r
 - Inspect HTML
 - dont-use-client-side
- **Goal:**
 - Practice using browser DevTools (Inspect Element, View Source).
 - Learn how client-side code can expose secrets.
 - Get comfortable spotting hidden flags in HTML, JS, and comments.

Day 3: Robots & Hidden Paths

- **Challenges:**
 - where are the robots
- **Goal:**
 - Explore robots.txt and understand how it can leak sensitive directories.
 - Practice following hidden paths to uncover flags.

Day 4: Cookies & Sessions

- **Challenges:**
 - Cookies
- **Goal:**
 - Learn how cookies store session/authentication data.
 - Experiment with editing cookies to manipulate access.
 - Understand how insecure cookie handling leads to vulnerabilities.

Day 5: Authentication & Logic Flaws

- **Challenges:**
 - Crack the Gate 1
 - WebDecode
- **Goal:**
 - Discover hidden developer logic in login portals.
 - Practice decoding obfuscated or encoded web content.
 - Strengthen skills in spotting weak authentication mechanisms.

Day 6–7: Advanced Exploits

- **Challenges:**
 - SSTI1 (Server-Side Template Injection)
- **Goal:**
 - Understand how template engines can be abused to execute code.
 - Learn payload crafting and injection testing.
 - Transition from “easy” inspection challenges to deeper exploitation.
